MSCB FROM TROX UK

WHY TROX FOR MULTI-SERVICE CHILLED BEAM (MSCB) DESIGN, TEST AND MANUFACTURE?

Experience
TROX UK have been involved in the design and manufacture of MSCB from their first inception. We have successfully developed beams for some of the most prestigious buildings across the country and our current programmes are built on longstanding repeat business with leading consultants and architect practices.

Single Point of Contact
We understand the challenges of managing a large group of subcontractors. When you work with TROX on a MSCB design and manufacture project we provide you with a single point of contact to address all aspects of the beam development, delivery and installation.

The Best Beam for your Project
TROX chilled beams can meet the energy efficiency and budgetary requirements you are looking for from the product. The MSCB option can also reflect your aesthetic vision too. From our gallery of images and reference projects you can see the diversity of product and ceiling effects that can be achieved by varying services, panels, extrusions, grilles and now even colour combinations.

TROX also has its own testing laboratories in Thetford. This allows for product testing and design verification ahead of manufacture. We regularly host project review meetings where all members of the project team can meet and agree on the final developed product.

For further information why not contact us or review some of the previous projects that TROX UK has been involved in on our "References and Installation Images" page.
