Induction diffusers for under sill mounting

Under sill induction unit with 2-pipe or 4-pipe heat exchanger, of compact height, for installation under a sill or on a wall. The condensate drip tray is useful if the temperature temporarily falls below the dew point.

- High heating and cooling capacity with a low conditioned primary air volume flow rate and low sound power level
- High comfort levels due to low airflow velocity in the occupied zone
- Four nozzle variants to optimise induction based on demand

Optional equipment and accessories

- Control equipment
- Lint screen to protect the heat exchanger from contamination
- Powder coating in many different colours, e.g. RAL CLASSIC
