Application

- Differential pressure transducer for the LABCONTROL system
- For the room or duct pressure control in combination with EASYLAB controllers TCU3 or LABCONTROL controllers TCU-LON-II
- For the room and duct pressure monitoring in combination with monitoring systems TPM
- For use in laboratories, clean rooms in the pharmaceutical and semiconductor industries, operating theatres, intensive care units, and offices with very demanding control requirements

Description

Variants

- 699: Measuring range ± 50 or ± 100 Pa
- 699-LCD: Measuring range ± 50 or ± 100 Pa, with differential pressure display
- GB404: Measuring range ± 100 Pa
- GB604-CAL: Measuring range ± 100 Pa, with calibration certificate to meet GMP requirements (Good Manufacturing Practice)
- Choose a sufficient measuring range above/below the setpoint pressure

Maintenance

- Zero point correction once per year is recommended

Functional description

Static differential pressure transducers function according to the static differential pressure measurement principle. The sensor is a cylinder that consists of two chambers (one for positive pressure and one for negative pressure) separated by a diaphragm. If there is equal pressure in both chambers, the diaphragm is in the middle between the chambers and is not deformed. If there is a pressure difference, the diaphragm deforms towards the chamber with the negative pressure. The degree by which the diaphragm deforms is a measure for the differential pressure. This is why the voltage signal is proportional to the differential pressure.

Principle of operation – room pressure control
Controller EASYLAB TCU3 or LABCONTROL TCU-LON-II

In a lab, the room pressure transducer is typically linked to the supply air controller; in a clean room, it is linked to the extract air controller.

Differential pressure transducer for the LABCONTROL system, for the measurement of room or duct pressure.

When the transducer is connected to a room controller, the supply air or extract air flow is controlled based on the differential pressure.

Order example: PT-GB604-CAL

Measuring range ±100 Pa, with calibration certificate

**PT – GB604**

**Variants**

- **699**: Measuring range ±50 or ±100 Pa
- **699-LCD**: Measuring range ±50 or ±100 Pa, with pressure display
- **GB604**: Measuring range ±100 Pa

**Application**

- Differential pressure transducer for the LABCONTROL system
- For the room or duct pressure control in combination with EASYLAB controllers TCU3 or with TCU-LON-II
- For the room and duct pressure monitoring in combination with monitoring systems TPM

**Variants**

- 699: Measuring range ±50 or ±100 Pa
- 699-LCD: Measuring range ±50 or ±100 Pa, with differential pressure display

**Special characteristics**

- Supply voltage: A.C. or D.C. voltage (ideal for EASYLAB with EM-TRF-USV)
- Short circuit proof and with reverse voltage protection

**Parts and characteristics**

- Plastic casing
- Connections for tubes
- Push button for zero point reset
Adjustable measuring ranges
699-LCD: Differential pressure display

Construction features
- Fixing points at the outside, for mounting to a wall or ceiling

Materials and surfaces
- Transparent plastic casing

GB604

Application
- Differential pressure transducer for the LABCONTROL system
- For the room or duct pressure control in combination with EASYLAB controllers TCU3 or with TCU-LON-II
- For the room and duct pressure monitoring in combination with monitoring systems TPM

Variants
- GB604: Measuring range ± 100 Pa
- GB604-CAL: Measuring range ± 100 Pa, with calibration certificate to meet GMP requirements (Good Manufacturing Practice)

Special characteristics
- Supply voltage: A.C. or D.C. voltage, switching between A.C. and D.C. is possible

Parts and characteristics
- Plastic casing
- Zero point potentiometer

Construction features
- Fixing points at the inside, for mounting to a wall or ceiling
- Capacitive stainless steel measuring cell

Materials and surfaces
- Plastic casing, light grey

Differential pressure transducer 699
Differential pressure transducer GB 604 MF

Installation details

Installation and commissioning
Choose a suitable installation location (reference room with stable pressure)
Ensure sufficient cross section and careful placing of the measuring tubes
Connect the differential pressure transducer to the controller or monitoring system
Supply voltage from the EASYLAB TCU3 controller or TCU-LON II (supply voltage for the differential pressure transducer must be equal to the supply voltage provided by the controller)
Consider the warm-up time of the sensor
Do not install the sensor near sources of interference such as transformers, senders, motors, or heat sources
Choose a stable installation location as shocks or vibration may distort the output signal
Installation should be vertical, with connections pointing downwards; this installation position corresponds to the factory setup for calibration; it also prevents the ingress of condensate from the pressure tubes.
Zero point correction required
